5.00 PM

Venue: EMRI GHS Campus, Naroda Kathwada Road, Near Dastan Circle,
Nava Naroda, Ahmedabad, Gujarat.

Introduction to EMRI GHS

EMRI Green Health Services – GVK Enterprise is a pioneer in Emergency Management Services in India. This organization was incepted in April- 2005 to deliver comprehensive, speedy, reliable, and quality emergency medical service to the population through a toll-free number 108. After the success of EMRI-108 human emergency services in handling emergencies in the rural setup, EMRI approached many state governments to introduce the concept of 1962 - Mobile Veterinary Services. This concept was taken up by many governments but immediately executed by the government of Tamilnadu in 2016 and expanded to 7 different operating states of India including Telangana, Gujarat, Andhra Pradesh, Uttar Pradesh, Uttarakhand, Assam, Jharkhand. EMRI GHS is having experience of serving 1.5 crore animals.

As a not-for-profit professional organization operating in the Public-Private Partnership (PPP) mode with the state governments, EMRI GHS has been operating in 16 states and union territories and serving more than 800 million people in India (www.emri.in).

Veterinary Medicine Learning Centre (VMLC) at EMRI GHS

In any endeavor, education and training are indispensable to the success of the final offering. Providing education and training in Emergency care is no exception to EMRI GHS. VMLC (Veterinary Medicine Learning Centre) of EMRI GHS with its inception in 2017, has a dedicated team of highly qualified Emergency Veterinary Professionals to develop skills in MVU staff for helping animals in emergencies and disasters. VMLC has been training veterinarians, para vets, and driver cum helpers of the MVUs on handling animal emergency cases in the field. VMLC has trained more than 3500 vets, 3000 para-vets, and 2500 driver cum helpers on handling veterinary emergency services in ambulatory settings. To deliver quality emergency veterinary services at par with global standards through Training, Education, Innovation, Technology, Care, and Research, EMRI GHS collaborated with global experts including the University of Wisconsin - USA, Stanford University, Maastricht University, Carnegie Mellon University, Singapore Health Services, Richmond Ambulance Authority, Tech Mahindra, etc., This is helping us in strengthening our service delivery by sharing knowledge, inculcating best practices, absorbing better technologies and innovations.

About the Event

This workshop is designed for Registered Veterinary professionals. The workshop aims to provide in-depth skills in managing fractures and wounds, focusing on contemporary techniques and evidence-based practices. This workshop is more than just an opportunity to stay current with the latest technologies—it's a chance to lead the way in informed, innovative, and compassionate care for your animal patients. As veterinary professionals, you play a crucial role in ensuring that the care you provide is both cutting-edge and empathetic. This workshop is tailored to help you excel in these areas, offering a blend of advanced knowledge and practical skills essential for veterinary practice.

Objectives

By the end of this workshop, participants will:

1. Describe the latest protocols and advancements in fracture management of livestock.
2. Demonstrate skills in assessing and treating different types of fractures and complex wound scenarios.
3. Communicate and impart proficiency in applying new technologies and materials in fracture and wound care.
4. Discuss effective strategies for post-treatment rehabilitation and recovery.

Expert Speakers

The workshop will feature presentations and Hands - on sessions from leading international experts in fractures and wound care management from University of Wisconsin- Madison, USA.
